Heavy goods vehicle wheel bearings

The range has been developed as replacement wheel bearings on tractor units and trailers in the HGV market.

Because of the heavy duty cycle for HGV applications there are specific maintenance requirements. This involves an annual technical inspection.

• Trailers : :

There is a compulsory service check on brakes every 60,000 kilometers. This can involve removal of the wheel bearings allowing inspection and the potential for replacement. As for any vehicle for road use, wheel bearings are replaced at 120,000 kilometers, unless excessive solicitations.

Our priorities :

- Reliable products for safe fault-free application
- A long life span for the products.
- An easy and rapid replacement.

The bearing range consists of tapered roller bearings :

- Standard, ISO, in metric or inch series (HDBxxx),
- Specific, in accordance with heavy goods vehicle manufacturers (HDSxxx).

Manufacturers and axle manufacturers part numbers
