

“Bringing you a complete tools and services solution for your bearings, suited to your application, size and resources”

**Experts
& Tools**

NTN-SNR Experts & Tools, at the service of our customers

Because expectations for the maintenance and mounting of bearings are specific to each customer, Experts & Tools offers you solutions that take into account your application and its importance to you as an available resource.

Each application requires special expertise. Maintaining a wind turbine is different to maintaining a printing press or a meat mincer. With the theoretical and practical experience we have accumulated over almost a century of dealing with industrial applications, NTN-SNR can provide you with the expertise and tools you need.

The scale and difficulty of your mounting and maintenance tasks determine our recommendations.

We provide a customised response in terms of tools and organisation, suited to your situation.

► **The NTN-SNR Group**, with more than 21,000 employees worldwide, produces and improves maintenance tools and methods on a daily basis. Our aim is to bring you products and procedures that are safe and easy for your staff to use. The design of our tools is aimed at increasing your efficiency. By reducing the amount of time it takes for mounting, dismantling as well as maintenance operations, and by maximising the working life of your bearings, our tools provide you with real savings and safety in use and will not damage the machinery they are being used on.

This catalogue contains the entire range of NTN-SNR maintenance tools. Our range of greases, greasers and centralised lubrication systems is contained in a separate catalogue..

► And if you decide to sub-contract your maintenance operations ?

The **Experts & Tools** teams can take care of this, based on agreed availability targets for your machinery.

Experts & Tools offers you a range of services that can be customised to meet your specific requirements:

- Theoretical and practical **training** for your employees
- **Diagnostics** on your damaged bearings (on site or in our laboratories)
- **Supervision** of the dismantling or mounting of your critical bearings. Of particular interest for larger bearings where we can supply appropriate tools, including handling tools.
- **Rental** of maintenance tools: bearing heaters, hydraulic nuts and pumps, etc.
- **Audits** of the daily operation of your industrial maintenance organisation
- **Survey** of your lubrication installations or an analysis of your needs, with the production and installation of appropriate standard or customised equipment.
- **Renovation** of bearings removed from equipment as part of a preventive maintenance programme
- **Vibration diagnostics** of rotary machinery or the establishment of a data collection programme for monitoring vibrations in your machinery.

THE ADVICE OF THE EXPERTS

➤ **Mounting a bearing: an essential stage which determines the life span and correct operation of the installation.**

➤ *The monitoring of the millions of NTN-SNR bearings sold has allowed us to establish very precise statistics on the origin of faults. This collection of data highlights one essential fact: it is rare that the bearing itself is the cause of a premature failure.*

In 90% of cases, the cause can be found in external components which can be classified into four categories:

INADEQUATE LUBRICATION (55%)

Inadequate or poor lubrication severely reduces the working life of a bearing.

It is often neglected because of bearing accessibility problems and a lack of knowledge about lubricants on the part of the user.

The choice of lubricant, the method, the quantity to apply to the bearing (neither too much nor too little) and the monitoring frequency must be properly studied.

NTN-SNR offers you a special service and markets a complete range of greases covering all applications, as well as an automatic greasing system.

POLLUTION (18%)

The environment in which bearings operate is often highly polluted. Dust, liquid detergents, and other contaminants can severely reduce the working life of a bearing.

To deal with these problems, NTN-SNR has developed a comprehensive range of sealing systems and will be pleased to advise you on the best choice for your application.

INCORRECT MOUNTING (17%)

The mounting of a bearing on a machine is a key stage in determining the length of its life. A bearing that is not mounted correctly can deteriorate very quickly.

The main causes are:

- *insufficient or poorly adapted methods and resources,*
- *contamination during mounting,*
- *the use of force during mounting,*
- *poor preparation of the receiving components: shafts and housings outside tolerance, poor access for the lubricant, misalignment.*

Abnormal noise levels can be a warning sign of deterioration. In the short term this causes fatigue of the bearing surfaces. NTN-SNR can provide you with mounting and dismounting services or tools and equipment to make these operations easier and more secure.

FATIGUE (10%)

Bearings are key components and are subject to fatigue. Even more so since they rarely operate in ideal conditions (overloaded machine, insufficient lubrication, etc.)

The stresses that active surfaces of bearings are subjected to create surface pitting damage sooner or later.

Our monitoring methods and support from our experts will enable you to act on the first indication of failure and organise appropriate maintenance operations.

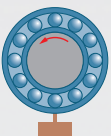

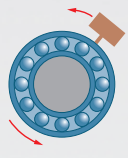

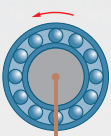

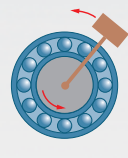

► Cold mounting is the simplest method and is suitable for small and medium-sized bearings, completed with the normal adjustments.

The most frequently observed problems:

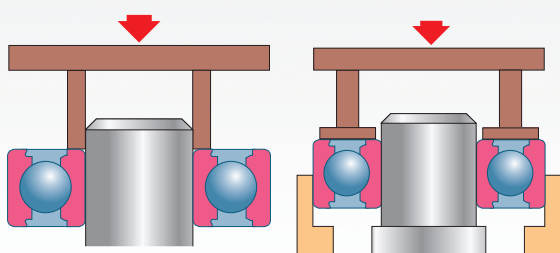

- Over- or under-tightening when adjusting
- Excessive impacts during mounting or forces causing rings and seals to break, or races to become indented.
- The accidental introduction of particles or liquids present in the mounting environment.

OUR RECOMMENDATIONS:

- 1st rule : the bearing must be firmly fixed to the rotating part

	Rotation analysis	
Load fixed in relation to the outer ring. Inner ring tightened onto the shaft.		
Load fixed in relation to the inner ring. Outer ring tightened into its housing.		

- 2nd rule : Mounting is carried out using impact rings applied to the bearing ring which has the tightest fit. This avoids stressing the rotating body and damaging the bearing.

- Special case of a long shaft for an assembly requiring a longitudinal adjustment of the bearing: it is preferable to use a mechanical coupling with a tapered seat joined to a bearing with a tapered bore.

► THE WORDS OF AN NTN-SNR EXPERT:

For easier mounting and to avoid contact corrosion of the shaft or the housing, always use an anti-fretting paste. This thick lubricant helps preserve the quality of parts surfaces subjected to sliding forces. Without this paste, corrosion will gradually increase the play between the bearing and the shaft (or housing), ultimately causing vibration and even the premature deterioration of the bearing and its mounting surfaces.

Avoid introducing contaminants when mounting (swarf, liquid, etc.)

Recommendations:

- Check bearing identifying marks against drawings, specifications and procedures.
- Check that bearing seat dimensions and the accuracy of their shape and position correspond to SNR drawings and specifications.
- Prepare all equipment, tools and parts required before starting the mounting. Ensure that everything is clean.
- Carefully clean and check all parts and devices in the bearing's environment.
- Remove the bearing from its packaging at the last moment in a completely clean working area.
- Never wash it, except in specified exceptional cases. The bearing is protected from oxidation by a light film of oil compatible with all lubricants.
- Mount the bearing, using the chosen method.
- Lubricate, using a special bearing grease, following the instructions given.
- After mounting and before final start-up, check its operation, so as to detect any possible anomalies (noise, vibrations, temperature, abnormal play, etc.).

MOUNTING TOOL KIT CASE

The NTN-SNR tool kit enables the quick and accurate mounting of bearings in complete safety.

31

APPLICATIONS

The right combination of impact ring and mounting sleeve ensures the effective transmission of mounting force.

The simultaneous support of the outer and inner rings prevents the risk of deterioration of the races and rotating assemblies.

The kit is also suitable for the mounting of other components such as handles, spacers, sealing rings, seals, pinions and pulleys.

ADVANTAGES

Of light and strong construction for workshop use, this toolbox contains:

33 impact rings:

- very robust for a long working life
- in impact-resistant, synthetic material, avoiding any metal-to-metal contact
- ideal for use in conjunction with a press
- calibrated for approximately 400 different bearings
 - with bore diameters between 10 and 50 mm
 - and with outside diameters between 26 and 110 mm
- clearly and permanently identified to aid selection

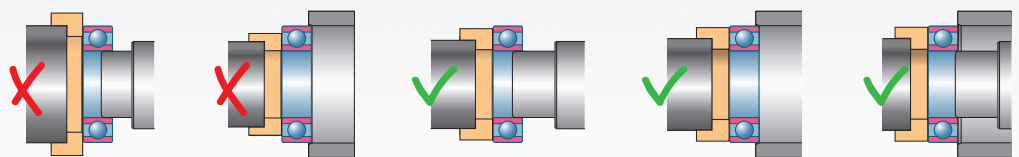

3 mounting sleeves:

- light and extremely robust, made of aluminium
- with a good grip for the hand

1 special dead blow mallet, ensuring optimum impact

ANTI-FRETTING PASTE

NTN-SNR anti-fretting paste is specially designed to prevent contact corrosion between two steel surfaces.

31

APPLICATIONS

- Contact corrosion, also known as fretting corrosion, appears in assemblies subjected to vibration or very slight slippage or oscillation. It can lead to the serious deterioration of bearings and other machine components and make dismantling very difficult.

ADVANTAGES

- Allows slippage for assemblies with play (wheel bearings, vibrating screens, etc.)
- Preserves the quality of the surfaces and the adjustment of mechanical assemblies by preventing contact (fretting) corrosion
- Facilitates the mounting and dismantling of bearings and components such as nuts, bolts, pins, flanges, couplings, fluted shafts, etc.
- Water and washing resistant
- Temperature range for use -40°C to $+150^{\circ}\text{C}$

COMMERCIAL REFERENCE

LUB ANTI FRETTING PASTE

ADJUSTABLE SPANNERS

5 spanners for tightening and loosening up to 30 differently sized nuts.

31

APPLICATIONS

- NTN-SNR adjustable spanners enable the safe and effortless tightening and loosening of all KM, KML and KMK type nuts and also B, TB, BR and TBR precision nuts. They avoid any damage to the nuts or the shaft.

ADVANTAGES

- Made of special tempered steel, these spanners are extremely strong
- The joint with its spring washer guarantees gentle reliable operation
- The laser-etched imprint makes them easily and permanently identifiable
- The hole in the handle makes them easy to store
- They are adaptable to cover nut diameters from 15 to 180 mm.

Available in two versions:

with pins for nuts with holes

with hook for slotted nuts

COMMERCIAL REFERENCE

- with pin: PS tool (size) / Pin spanner
- with hook: HS tool (size) / Hook spanner

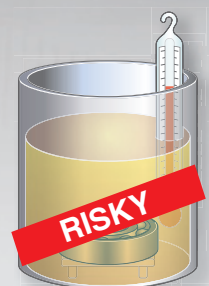

► Hot mounting makes it possible, by raising the bearing's temperature, to expand the inner ring so that it can be fitted over the shaft with ease.

- In the event of a tightly fitting outer ring, prior to the insertion of the bearing, the housing can be expanded by heating
- Following the reverse principle, a shaft can also be cooled using liquefied gas to facilitate its insertion into a bearing's inner ring.

NTN-SNR's induction heaters provide the best solution in terms of safety, cleanliness and speed compared with oil-bath heating, hot plates or ovens.

Heating with a torch should not be permitted.

It generates localised temperatures that damage the bearing and so shorten its expected life.

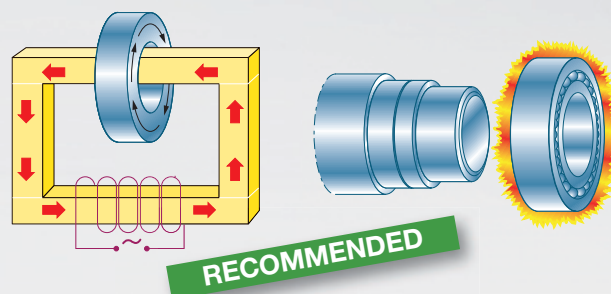

PRINCIPLE OF HEATING BY INDUCTION

The device comprises a steel framework surrounded by a coil with a large number of windings. When a current passes through it, this primary coil generates a magnetic field which itself induces an electric current in the bearing (or other steel part), substituted for the secondary coil of an electrical transformer.

When a high-intensity, low-voltage AC current passes through it, the bearing heats up quickly while non-metallic parts and the device itself remain cool.

Induction heating magnetises the bearing. It is therefore necessary for the heater to demagnetise it at the end of the heating cycle. This avoids steel particles being attracted into the bearing later on.

► THE WORDS OF AN NTN-SNR EXPERT:

The temperature must not be too high, so as not to change the characteristics of the steel or the internal components of the bearing (maximum 130°C).

On the other hand, it must be sufficient to cause sufficient expansion for the easy installation of the bearing thanks to the temporary loosening.

The heating temperature is a function of the size, on the one hand and the fit of the seat on the other.

As a general rule, the following temperatures are recommended :

Ø bore dia	T° heating temp
Up to 100 mm	+ 90°C
From 100 to 150 mm	+ 120°C
Above 150 mm	+ 130°C

The mounting of a bearing onto a shaft or into a housing requires a certain skill for proper alignment. The use of anti-fretting paste facilitates insertion and protects the shaft or housing from contact corrosion.

The wearing of heat insulating gloves is necessary for the safe and comfortable handling of the heated parts.

In the case of heavy bearings, help will be required for their handling (use of a sling and mobile hoist or even an overhead crane).

THE RIGHT QUESTIONS TO ASK YOURSELF WHEN SELECTING A HEATING DEVICE :

- How big are the parts to be heated? (Max. external diameter, max. width, min. and max. bore)
- What are the min. and max. weights of the parts?
- What temperature has to be achieved?
- What electrical current and voltage are available in the workshop?

The major advantages of the FAST THERM range:

PRACTICAL AND SIMPLE IN USE

- Robust design for use in an industrial environment
- Ready for immediate use
- Requires no maintenance
- Ergonomic, the pivoting yoke of sizes 35 to 300 facilitates the positioning of the parts to be heated.
- User-friendly; the touch-screen controls can be operated while wearing protective gloves
 - only three buttons are required to programme the portable version (two for setting the temperature (+50°C to +240°C) and one to start)
 - 2 additional buttons on the other versions also enable control of the "heating time" (0 to 99 min).
 - Display of the temperature and time and also error codes for quick trouble-shooting
- Audible signal at the end of the heating cycle
- Choice of °C or °F temperature display

HEATING CONTROL AND SAFETY

- Optimum control of the heating cycle by microprocessor and magnetic temperature probe.
- Quick even heating of parts and no risk of over-heating
- The equipment uses a default temperature of 110°C.
- Automatic demagnetising at the end of the cycle.

► The bearing's initial quality is maintained.

- Only the part to be heated is subjected to an increase in temperature (easier handling, no risk of burning)
- Thermal insulation of the magnetic probe
- Meets EEC legislative standards.

► Operator safety ensured

ROBUST AND EFFICIENT

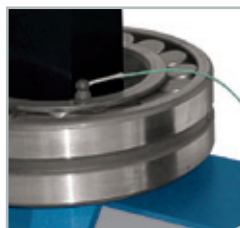

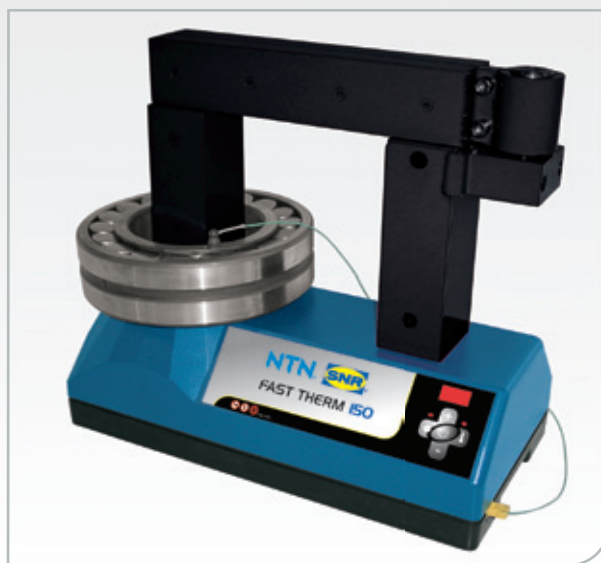

- Robust industrial design, guaranteed for three years.
- Oil-, dust- and water-resistant control screen
- Quick and economical with its TURBO-BOOST operating mode
- In a horizontal position (placed on a polyamide base), the part heats twice as quickly.
- Efficient, it is no longer necessary to heat the same part several times to keep it at the desired temperature.

As soon as the temperature drops 5°C, the machine automatically resumes the heating cycle. This resumption occurs over five consecutive cycles.

ECOLOGICAL

- No fumes or oil vapour.
- Excellent energy yield (approx. 80%), thus guaranteeing:
 - Savings in time and energy
 - A longer life for the appliance.

Delivered as standard with a temperature probe, protective gloves and instruction manual.

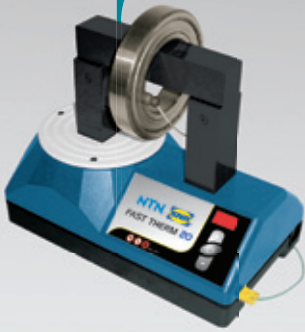

HEATING EQUIPMENT

FAST THERM 20

Portable induction heater.

33

ADVANTAGES

- **Small, light heater:** weighs only 17 kg.
- **Easy to use,** ideal for working on site.
- **Designed** for all bearings and rotating parts with a bore diameter above 20 mm with a maximum diameter of **280 mm** and a maximum weight of **20 kg**.

Delivered as standard with core bars and a sturdy carrying case

COMMERCIAL REFERENCE

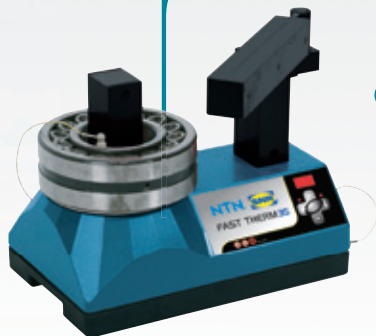

- TOOL FAST THERM 20 / Induction heater

FAST THERM 35

Induction heater with pivoting arm, a best-seller for maintenance and production workshops

33

ADVANTAGES

- Used as fixed equipment
- **Compact**, it weighs only 31 kg and can be easily moved using its two side handles.
- **Flexible:** apart from the temperature control mode, it also has, like all the larger models, a heating time control for large parts (shrink-on rings, pinions, pulleys, etc.)
- **Ergonomic:** the standard **pivoting arm facilitates** the loading of the parts to be heated.
- **Designed** for all bearings and rotating parts with a bore diameter above 20 mm with a maximum diameter of **410 mm** and a maximum weight of **35 kg**.

*Delivered as standard with a bar for bores of 70 mm and above.
Other available yoke sizes(3) can be ordered to suit the application.*

COMMERCIAL REFERENCE

- TOOL FAST THERM 35 / Induction heater

FAST THERM 150

Compact induction heater, economical, providing high heating capacity for bearings of up to 150 kg.

33

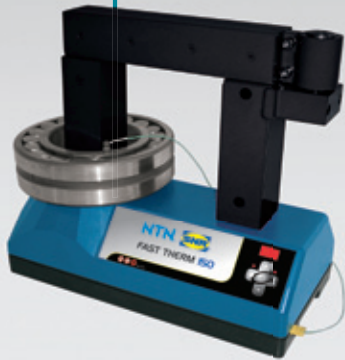

ADVANTAGES

- **Ergonomic:** the standard **pivoting arm facilitates** the positioning of parts to be heated.
- Voltage / Current **400 V / 32 A**,
- Designed for all bearings and rotating parts in a horizontal position with a bore diameter over 30 mm with a maximum outside diameter of **490 mm** and a maximum weight of **150 kg**.

Delivered as standard with the core bar for bore diameters of 100 mm or greater. Five other available yoke sizes may be ordered to suit your particular application.

COMMERCIAL REFERENCE

- TOOL FAST THERM 150 / Induction heater

FAST THERM 300

Powerful mobile induction heater for bearings up to 300 kg.

33

ADVANTAGES

- **Ergonomic :** thanks to its **pivoting yoke the parts** to be heated can be positioned easily.
- Fitted on a trolley with a yoke storage shelf, it can be moved quickly and safely around the various areas of the production floor.
- Voltage / Current **400 V / 32 A**
- Designed for all bearings and rotating parts in a horizontal position with a bore diameter over 30 mm with a maximum outside diameter of **740 mm** and a maximum weight of **300 kg**.

Delivered as standard with a core bar for bores of 100 mm and above. Other available yoke sizes (6) can be ordered to suit the application.

COMMERCIAL REFERENCE

- TOOL FAST THERM 300 / Induction heater

FAST THERM 600

Robust, extremely powerful induction heater for heavy parts of up to 600 kg.

34

Machine typically intended for heavy machine workshops (steel-making, paper, gear manufacturing, naval yards, etc.).

ADVANTAGES

- **Ergonomic:**
 - The core bars are positioned vertically and are equipped with a lifting ring.
 - An optional core bar winch simplifies handling.
 - The control screen is directable for operator comfort.
- **Extremely robust:** the design in steel with a glass-fibre coating makes the Fast Therm 600 particularly resistant to impacts and corrosion.
- Parts may be heated horizontally or vertically. In the vertical position, the parts rest on support rails (they are not suspended on the fixed core bar).
- Voltage / Current **400 V / 63 A**
- Designed for all bearings and rotating parts in a horizontal position with a bore diameter of over 45 mm with a maximum outside diameter of **900 mm** and a maximum weight of **600 kg**.

Delivered as standard with a core bar for bores of 145 mm and above. Other available yoke sizes (7) can be ordered to suit the application.

COMMERCIAL REFERENCE

- TOOL FAST THERM 600 / Induction heater

FAST THERM 1200

Robust, extremely powerful induction heater for heavy parts weighing up to 1,200 kg.
Indispensable in machine shops in steelworks, paper mills and the rail and wind turbine sectors.

34

ADVANTAGES

• Ergonomic:

- The core bars are positioned vertically and are equipped with a lifting handle.
- A core bar winch is offered as an option.
- The directable control screen provides added comfort for the operator.

• **Extremely robust:** made of steel with glass-fibre supports to be heated, particularly resistant to impacts and corrosion.

• Parts may be **heated horizontally or vertically.** In the vertical position, the parts rest on the support rails (they are not suspended on the fixed horizontal core bar).

• Voltage / Current **400 V / 100 A,**

• **Designed** for all bearings and rotating parts in a horizontal position with a bore diameter of over **85 mm** with a maximum outside diameter of 1,500 mm and a maximum weight of **1,200 kg.**

*Delivered as standard with a core bar for bores of 215 mm and above.
Other available yoke sizes (3) can be ordered to suit the application.*

COMMERCIAL REFERENCE

- TOOL FAST THERM 1200 / Induction heater

ACCESSORIES

A lifting device is offered for use with the Fast Therm 600 and 1200.

34

It is easily installed on the heater and is extremely useful in intensive applications and the handling of heavy core bars.

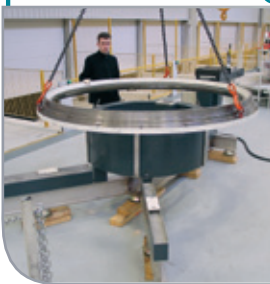

COMMERCIAL REFERENCE

- TOOL FT (Capacity) LIFTING DEVICE

Both the Fast Therm 600 and 1200 can be supplied in a mobile version.

SPECIAL PRODUCTS

NTN-SNR is able to design machines, specially adapted to your application.

This device, especially developed for a wind turbine application, is capable of heating parts of up to 10 tonnes with an outside diameter of 4 metres to a temperature of 120°C in 60 minutes.

Thus, the dimensions and performance of the Fast Therm 600 and 1200 can be modified to match precisely the geometry of your parts, your **production patterns** and the **electrical supply available** * in your workshops (*from the Fast Therm 150 upwards).

Customised equipment can also be developed for your large metal parts, such as for wind turbine and railway applications.

We can provide you with a quotation based on the following information:

- The weight of the part to be heated (min/max)
- The dimensions of the part (min/max bore, max. outside diameter, max thickness)
- Electrical power and voltage available
- Temperature to be achieved
- Desired heating time or production pattern

► The mounting of large bearings with a tapered bore requires considerable effort, difficult to achieve using mechanical screw tightening. The use of hydraulic technology is required in such cases.

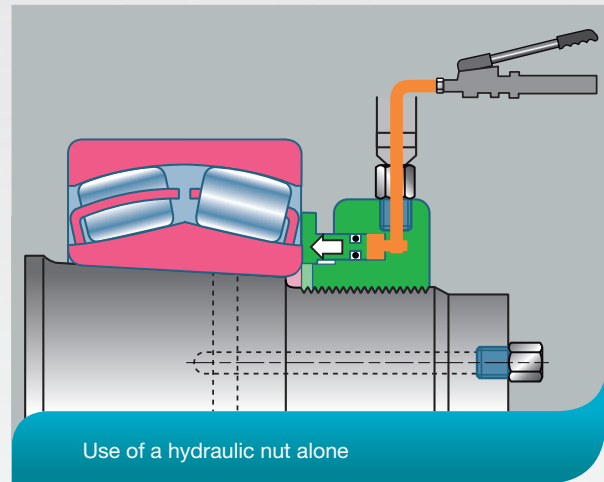

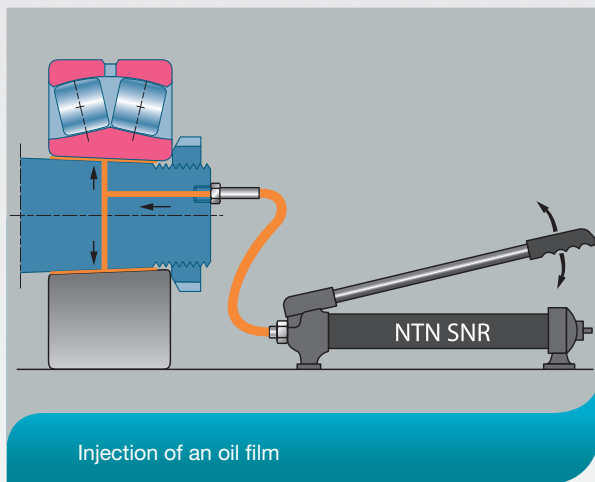

Either an oil film is injected over the whole of the contact surface between the shaft and the inner ring. This reduces the friction generated by the mounting and facilitates tightening.

Or the oil is sent at very high pressure into a hydraulic nut which develops the thrust required for the mounting.

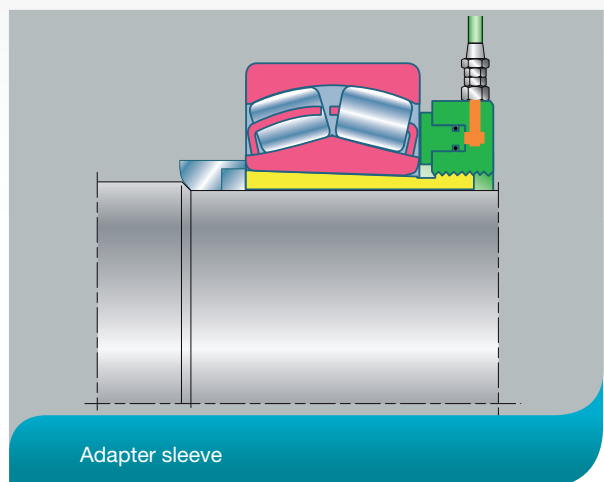

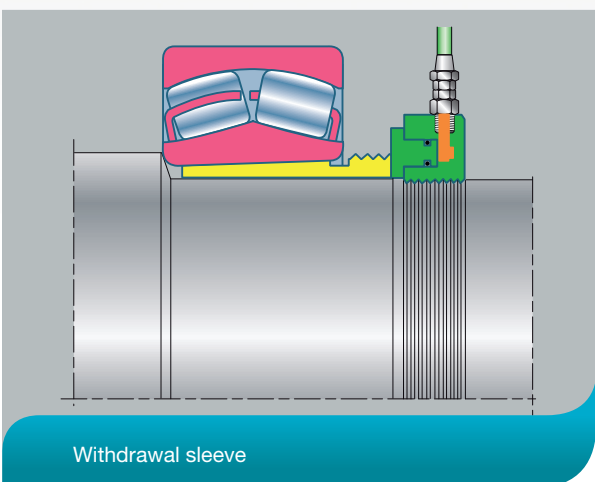

The two principles may also be used simultaneously to make mounting easier. The residual clearance is checked using feeler gauges or a comparator which measures the embedding on the tapered contact surface.

Two types of mounting lend themselves to this method :

TAPERED SEAT SHAFTS

SHAFTS WITH A CYLINDRICAL CONTACT SURFACE IN ASSOCIATION WITH A SLEEVE

MANUAL HYDRAULIC PUMP KITS

A two-stage, high-pressure, ultra-light hand pump, 700 bar (70 mPa)

38

APPLICATIONS

These high-pressure pumps are designed for use with automatic return hydraulic nuts or for the mounting and dismounting of bearings coated with an oil film.

Pumps are supplied as standard with the following accessories designed for use at 700 bar:

- 1 pressure gauge, minimising the risk of overloading
- 1 high-quality flexible hose (1.5 m for a 0.3 litre pump reservoir, 3 m for a 0.9 litre reservoir)
- 1 quick coupling connection (female) suitable for NTN-SNR hydraulic nuts
- They are supplied filled with hydraulic oil

ADVANTAGES

- Ultra-light, compact design
- Robust reservoir in composite materials
- Ergonomic: locking of the lever to facilitate transport
- Robust: pump guaranteed for life under normal conditions of use
- Efficient: savings in time and effort due to the two stages which allow a reduction of 80% in the number of pump strokes required in comparison with single-stage pumps.
- User safety: electrically isolated lever and safety relief valve
- Flexible: Two available reservoir sizes:
 - 0.3 litre for HMV 54 E BF nuts and below
 - 0.9 litre for HMV 92 E BF nuts and below

Accessories included

- Pressure gauge (0-700 bar)
 - Liquid filled to protect against any sudden loss of pressure
 - Dual markings in bars / PSI
 - Fitted with a device protecting against bursting
- 700 bar hose
 - Very strong thermoplastic, reinforced with layers of woven steel wire
 - Polyurethane envelope for extreme abrasion resistance
 - With a rubber protective "handle".
- With quick coupling protection (female) 1500 bars, which provides maximum safety with end stop locking and optimum sealing with a flat face valve.

Technical characteristics of the hydraulic oil

Contains corrosion inhibitors which do not attack sealing materials such as nitrile.

Relative density at 15°C : 0.870 kg/dm³

Viscosity at 40°C : 31 Cst

Viscosity index : 102

Flash point : 230°C

Freezing point : -36°C

COMMERCIAL REFERENCE

TOOL PUMP SET 700B - (reservoir capacity) L / Pump with accessories

SET OF CALIBRATED FEELER GAUGES

A simple and precise tool for measuring the clearance between two parts

39

APPLICATIONS

This feeler gauge set allows the quick, accurate measurement of radial clearance, especially on spherical roller and cylindrical bearings. It contains 17 gauges.

2 versions of the gauge set are offered: 150 mm and 300 mm long

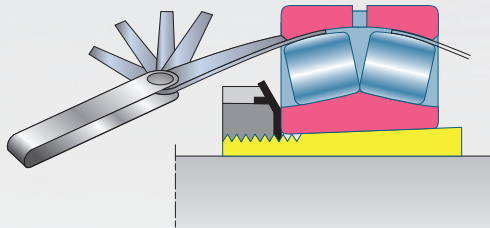

ADVANTAGES

- Set of 17 round end gauges
- Available in 150 and 300 mm
- In a protective steel sleeve
- Calibrated to 1/100 (from 0.02mm)

Supplied with a set of the 5 thinnest blades as spare parts

COMMERCIAL REFERENCE

FEELER GAUGE TOOL (gauge length)

HEAT-RESISTANT GLOVES

Protective gloves for the safe handling of hot, oily parts up to +350°C.

39

ADVANTAGES

- Made of KEVLAR, they are extremely resistant to tearing, abrasion and cuts
- Non-flammable: they provide a high level of protection against contact and convective heat.
- They are tested and certified for mechanical (EN 388) and thermal (EN407 hazards)
- Non-fluffy, they avoid polluting the bearings.
- Extremely comfortable, they are useful for all maintenance work.
- Single size: 10.5

COMMERCIAL REFERENCE

HEAT RESISTANT GLOVES

LASER TEMP 301 INFRARED THERMOMETER WITH LASER TARGETING

Establish an initial diagnosis of how machines are operating with completely safe and precise remote or contact temperature measurements.

40

APPLICATIONS

The LASER TEMP 301 thermometer combines safety with accuracy.

- The safety of remote infrared measurement for burning, moving or difficult-to-access objects.
- Accurate measurement using the contact probe.

Its elaborate optical system allows small, remote targets to be measured easily and precisely.

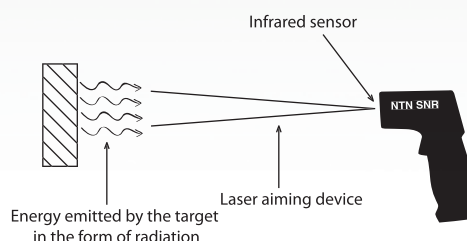

ADVANTAGES

- Wide measurement range in infrared mode: -50°C to $+850^{\circ}\text{C}$
- High degree of precision, using the
 - laser targeting device
 - the excellent 30:1 distance:target ratio
 - emissivity adjustable between 0.1 and 1
 - type K thermocouple wire probe
- Extremely quick measurements: response time less than 1 sec.
- Internal memory able to record up to 20 measurements.
- Equipped with the following functions:
 - High / low, visual and audible adjustable alarms
 - Automatic switch-off to maximise its useful life
 - Max, min, difference, average measurements
- Light, ergonomic gun shape
- Simple to use, it may be easily configured to work in $^{\circ}\text{C}$ or $^{\circ}\text{F}$.
- Back-lit display for easy reading.

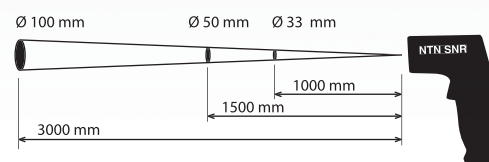

Supplied with: Type K thermocouple wire probe (range -50°C to $+440^{\circ}\text{C}$, length 1 m)
Protective pouch - User manual

2-DISMOUNTING

THE ADVICE OF THE EXPERTS

Disassemble cleanly: Look after your equipment and save time, safely.

Attention: the dismantling of bearings is a delicate operation, both for the operator and for the mechanical items involved.

If mounting requires a lot of know-how, the risks involved in dismantling cannot be ignored, even if the bearing is to be scrapped.

By opting for the correct methods and tools, you reduce the risk of personal injury and damaging parts (shaft, housing, even the bearing, if it is to be re-used).

The two main principles for dismantling are mechanical and hydraulic.

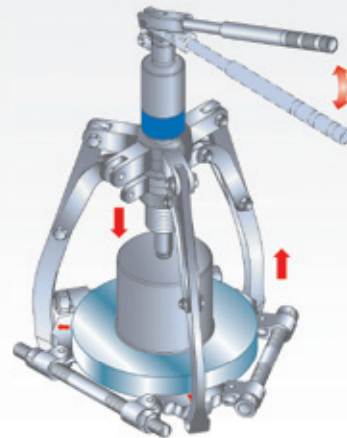

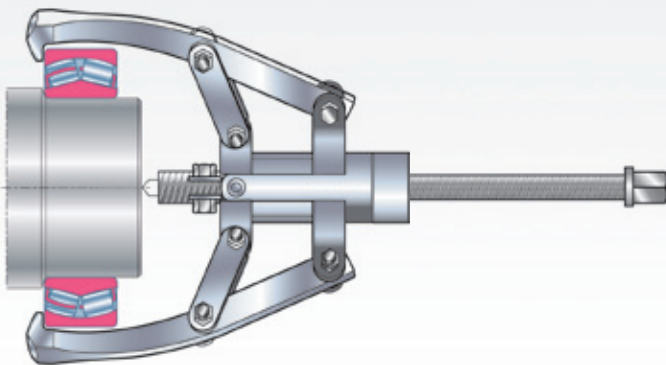

MECHANICAL DISMOUNTING

Whenever possible; apply the withdrawal force to the ring with the interference fit.

There are numerous types of extractor, depending on the grip offered by the bearing, its accessibility and the extraction force required.

Extractors equipped with a pump and hydraulic cylinder allow the operator to develop very high extraction efforts, using his own muscular strength. They are easy to use, due to the fact that their arms are self-centering.

If hydraulic channels were originally provided in the shaft, the injection of a film of oil on the contact surface between the shaft and the inner ring greatly reduces the effort required.

THE RIGHT QUESTIONS TO ASK :

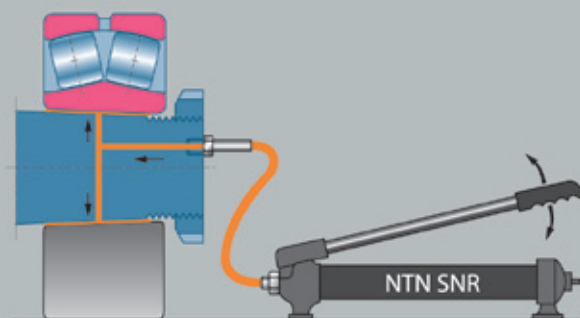

- How do I grip the part?
Selection of the type of grip: external, internal or special.
- What is the diameter of the part to be extracted?
Enables the seat, spread and force to be defined.
- How do I pull on the part?
Choice of a support point: on the central shaft, on the outside of the part or using extraction accessories.

HYDRAULIC DISMOUNTING

If an adapter or withdrawal sleeve was used during mounting, a hydraulic nut can be used for quick and effortless dismounting.

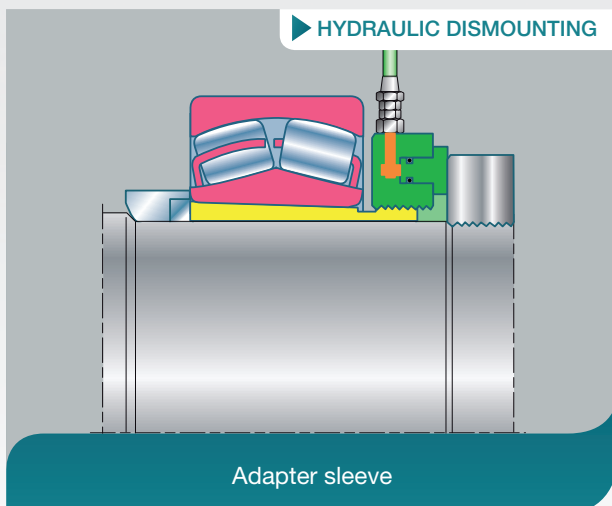

(For more information on hydraulic nuts, please see page 16 of this catalogue).

► HYDRAULIC DISMOUNTING

► HYDRAULIC DISMOUNTING

Adapter sleeve

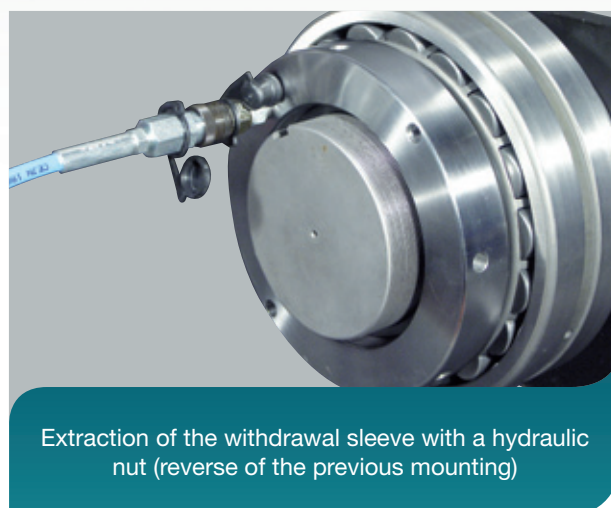

► HYDRAULIC DISMOUNTING

Withdrawal sleeve

Extraction of the adapter sleeve with a hydraulic nut

Extraction of the withdrawal sleeve with a hydraulic nut (reverse of the previous mounting)

BORE PULLER

41

Puller kits for internal gripping of the bore.
For quick and easy dismantling of bearings tightly mounted in a housing.

APPLICATIONS

Ideal selection of high-strength extractors with braces for extraction via the bore:

- Bearing whose outer ring is a tight fit in its housing.
- Outer rings or rings with well locked packing.

ADVANTAGES

Robust

- Pullers designed in 2 parts and manufactured in special, strong, break and wear-resistant steel, ensuring a long life.
- Arms in carbonitride steel not requiring any special maintenance

Ergonomic

- Mechanical spindle with handle

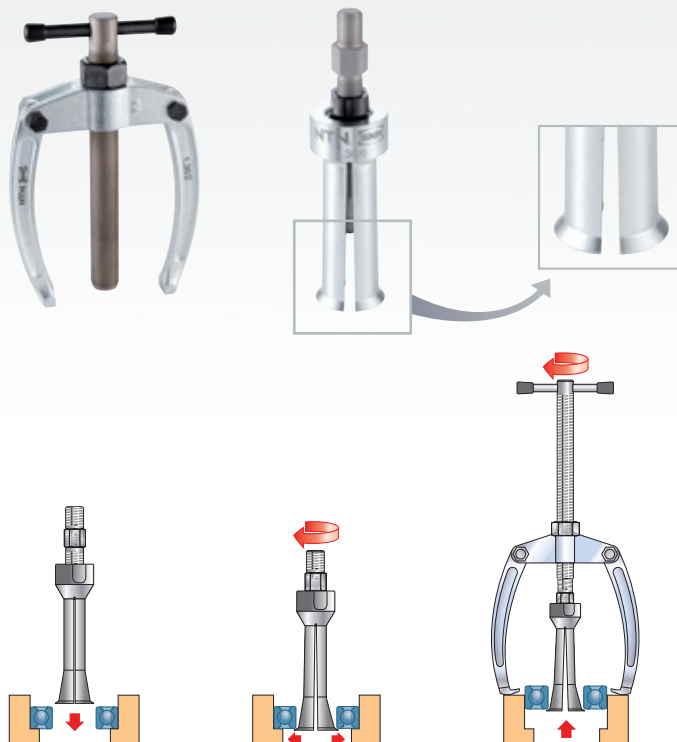

Wide range of use

- BP Set 12-45 includes 6 pullers for 12 to 45 mm bore diameters
- BP Set 35-100 includes 4 pullers for 35 to 100 mm bore diameters

Each kit is supplied in a solid steel case.

COMMERCIAL REFERENCE

BP TOOL SET 12-45 / BORE PULLER
BP TOOL SET 35-100 / BORE PULLER

PULLER-SEPARATOR WITH MECHANICAL SPINDLE

For an easy and safe dismounting of rings or bearings tightly fitted on a shaft and difficult to grip

42

APPLICATIONS

Also allows the extraction of all parts mounted onto a shaft by force, such as pulleys, handwheels and pinions.

The set, supplied in a strong steel case, includes:

- a puller/pusher with 5 ton capacity mechanical spindle.
- extension rods for quick adaptation to required pulling length.
- a 2-blade separator to separate and grip rings and bearings from the rear with an external dimension between 22 and 115 mm.

ADVANTAGES

Practical and safe

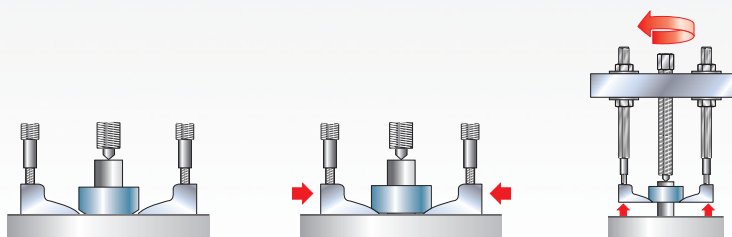

- Gradual simple screw extraction
- The sharp bevelled blades ensure a good grip, so avoiding any locking of the part to be extracted and any deterioration of the shaft's seat.
- After separation by tightening the two blades, turning the separator enables greater force to be used without deforming the blades for the complete extraction of the part

Robust

- Separating blades are made of special steel for added strength and durability.
- The arm in carbonitride steel does not require any special maintenance: no more need for oil or grease

COMMERCIAL REFERENCE

TOOL BPM 22-115 / Back puller mech spindle

2/3 ARMS SELF-CENTERING MECHANICAL PULLER

A simple, robust and efficient range of pullers for an easy and safe dismantling of small or medium size bearings.

42

APPLICATIONS

Also suitable for removing pulleys, gear wheels, handwheels, etc, fixed to a shaft.

ADVANTAGES

Practical

- The self-centering mechanism ensures the simultaneous positioning of the puller's arms on the bearing.
- Compact and ergonomic, it may be easily operated in every position by one person.

Safe

- Self-locking system prevents the arms from bending or slipping.
- The greater the extraction force, the tighter the jaws grip the part.
- Robust, designed in hardened steel for maximum strength

Multiple uses

- Quickly convertible to two or three claws, depending on the space available.
- Three available models for selection according to the outside diameter of the parts to be extracted and the required reach. :

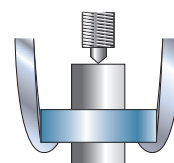

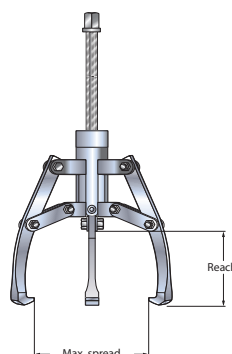

Max. spread mm	Max. reach mm	Capacity Tons
120	80	2
180	120	3
270	160	5

COMMERCIAL REFERENCE

TOOL SCMP 2/3-120 / Self-center mech puller

TOOL SCMP 2/3-180 / Self-center mech puller

TOOL SCMP 2/3-270 / Self-center mech puller

2/3 ARMS SELF-CENTERING HYDRAULIC PULLER

A range of powerful pullers for a safe and easy dismantling of large bearings and force-fitted parts such as pulleys and gear wheels.

43

APPLICATIONS

The self-centering device facilitates positioning and anchoring around the bearing. The power developed by the hydraulic system allows the part to be extracted safely with very little effort.

ADVANTAGES

Practical

- Ready-to-use in a strong case. No assembly of the jaws required before use.
- Compact: the self-contained hydraulic pump and cylinder save space. No need for a separate pump, hose or spindle.
- Ergonomic: pump handle pivoting through 360°, allowing the extractor to be used in the most comfortable position. Telescopic, it provides optimum transmission of the effort.
- Easy centering of the piston on the shaft with retractable, integrated point.
- A piston extension is supplied for use with a remote support surface.
- A piston return device makes it ready immediately for further use.
- Long stroke of hydraulic spindle facilitates dismantling in one operation.

Multiple uses

- Possibility to change between two or three jaws, depending on the accessibility of the bearing.
- Available in three versions, depending on the power and size required: 4, 12 and 20 tons.

Capacity tons	Max. spread mm	Max. reach mm	Cylinder stroke mm
4	325	190	60
12	485	305	85
20	570	365	111

- For the 4 and 12-tonne capacity, an accessory kit consisting of a puller block, connecting rods and a set of bearings separators increases the number of uses and makes separation easier.

Safe

- A safety relief valve prevents any risk of overloading and limits the force applied to the maximum capacity of the equipment.
- A cover protects the user from possible flying bearing fragments. Made of transparent material, it provides good visibility for controlling the extraction.
- The 20-ton model is equipped with an innovative two-stage pump which makes operation easier and safer.

COMMERCIAL REFERENCE

TOOL SCHP 4 TONS / Self-center hyd puller
TOOL SCHP 12 TONS / Self-center hyd puller
TOOL SCHP 20 TONS / Self-center hyd puller

ACCESSORY CASE FOR 4 AND 12-TON SCHP

A strong grip for a safe and easy dismounting.

APPLICATIONS

A separator is a complementary tool to a claw extractor when the latter does not have sufficient grip. A perfect grip on the back of parts, using bevelled blades, reduces the force necessary for dismounting and avoids damaging the shaft's contact surface

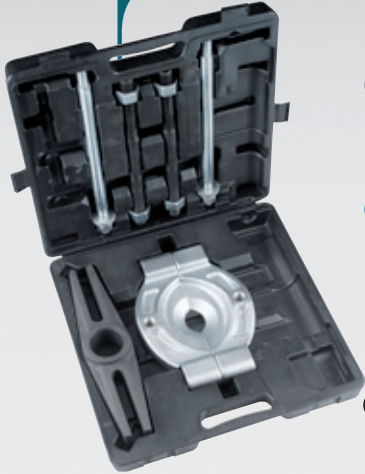

ADVANTAGES

- Robust design ensuring a long life for the separation blades.
- After separation by tightening the two blades, turning the separator enables greater force to be used without deforming the blades for the complete extraction of the part.
- Easy centering of the piston on the shaft with its retractable, integrated point.
- Two versions are available, depending on the power required. 4 and 12 tons.

COMMERCIAL REFERENCE

TOOL AS-SCHP 4T / acc set hyd puller

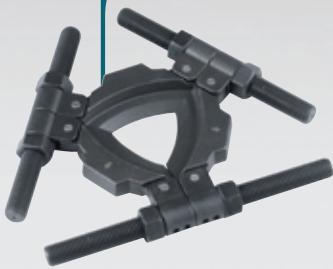

TOOL AS-SCHP 12T / acc set hyd puller

TRI-SECTION PULLING PLATE, UNIVERSAL

A strong grip for safe and effective dismounting using a mechanical or hydraulic extractor.

43

APPLICATIONS

The tri-section pulling plate is the complementary tool to the three-armed pullers when the latter does not have sufficient grip. Universal, it is suitable for both the SCHP 4-tonne hydraulic extractor and the SCMP 270 mechanical model.

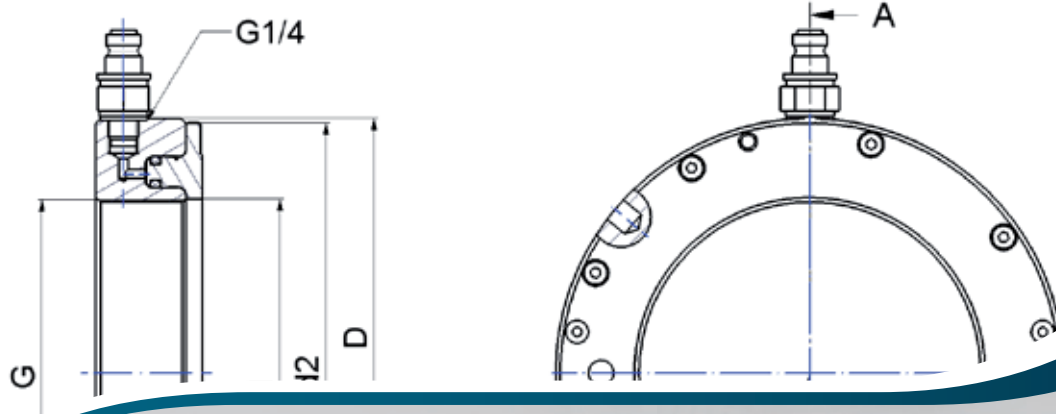

ADVANTAGES

- The blades fix behind the bearing's inner ring, where the extraction force is most effective.
- The application of the effort on the inner ring minimises the risk of damaging the bearing while preserving the rolling body and the outer ring.
- The tri-section construction distributes the extraction force evenly, preventing bearing from locking and/or tilting on the shaft during dismounting.
- Economical: the BP3S 50-210 covers all shafts with a diameter of between 50 and 210 mm.

COMMERCIAL REFERENCE

Reference : TOOL GLOVE HEAT RESISTANT

> P 18

Description	Heat resistant glove
Material	KEVLAR
Lined	Coton
Single size	10.5
Maximum temperature	350°C
Quantity per packet	1 pair

APPLIANCE CHARACTERISTICS

Spectral response	8 -14 mm
Optical	D.S : 30:1 (50 mm to 1500 mm)
Response time	Less than one second
Temperature range	From -50 to +850°C
Accuracy*	From -50 to -20°C : $\pm 5^{\circ}\text{C}$ From -20 to +200°C : $\pm 1.5\%$ of the reading $\pm 2^{\circ}\text{C}$ From +200 to +538 °C : $\pm 2\%$ of the reading $\pm 2^{\circ}\text{C}$ From +538 to +850°C : $\pm 3.5\%$ of the reading $\pm 5^{\circ}\text{C}$
Display resolution	0.1 C°
Emissivity	Adjustable between 0.10 and 1.00 (pre-set at 0.95)
Indication of level exceeded	Screen indication : « -OL » for negative level exceeded, « OL » or positive level exceeded.
Laser aiming device	Wave length : 630-670 nm output lower than 1mW, class 2 (II)
Indication of positive or negative temperature	Automatic (no indication for a positive temperature). Minus sign (-) for a negative temperature
Screen	4½ digits with backlit LCD screen
Auto switch-off:	After 7 seconds of inactivity
High/low alarm	Flashing signal on screen and audible signal with adjustable thresholds
Supply	9 V alkaline battery
Battery life	38 hr (laser and backlight inactive) 15 hr (laser and backlight active)
Temperature for use	From 0 to +50°C
Storage temperature	From -20°C to +60°C
Relative humidity	Between 10 and 90% in operation and less than 80% during storage
Dimensions	175 x 110 x 45 mm
Weight	230 g (including battery)
Memory	20 temperature values with unit of measurement (°C or °F)

* Accurate for an ambient temperature between 18 and 28°C (with relative humidity below 80%)

CHARACTERISTICS OF THE K THERMOCOUPLE PROBE

Temperature range	From -40 to +400°C
Display range	From -50 to +1370°C
Resolution	0.1°C
Accuracy	$\pm 1.5\%$ of the reading $\pm 3^{\circ}\text{C}$
Cable length	1 m

The devices meet the following standards
1992, electromagnetic emissions

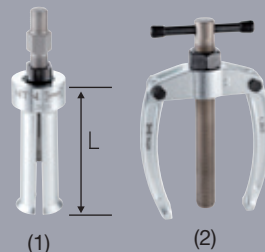

1992, electromagnetic interference

SCHP 12 Tons	12	305	85	485	90	15	16.5	29	70	60	28	14,5
SCHP 20 Tons	20	365	111	570	120	20	27	33	62	80	40	25

Reference : **TOOL AS-SCHP (Hydraulic extractor capacity) T / Acc set hyd puller**

> P 27

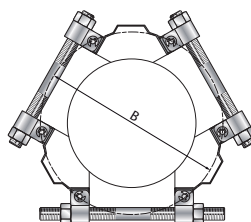

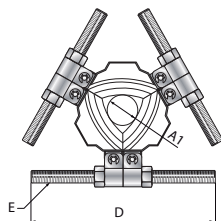

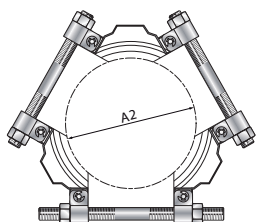

Description	Accessories case for self-centering hydraulic puller		
Contenu	1 pulling arm / 2 braces / 1 separator, 2 blades with 2 threaded studs		
Reference	Length of braces (mm)	min/max spread (mm)	Weight (kg) including case
AS-SCHP 4 T	250	25 - 110	6
AS-SCHP 12 T	325	80 - 225	21

Reference : **TOOL BP3S 50-210 / TRI-SECTION PULLING PLATE**

> P 28

Description		Three-blade extraction plate				
Materials		Forged steel alloy				
DIMENSIONS						
Min/max shaft diameter (A1) / (A2) (mm)		Max spread B (mm)	Length D (mm)	Thread E	Thickness F (mm)	Weight (kg) product only
50	210	280	285	3/4" – 16 UNF	31	5,5

REFERENCE	DESCRIPTION	Catalogue page	Technical datas page
LUB ANTI FRETTING PASTE	Contact corrosion anti-fretting paste	P 09	P 31
TOOL AS-SCHP (Capacity) T / Acc. Set Hyd Puller	Accessories for self-centering hydraulic puller	P 27	P 43
TOOL BP SET (Min size / Max size) / Bore Puller	Puller kit with internal gripping of the bore.	P 23	P 41
TOOL BP3S 50-210 / Tri-Section Back Puller	Tri-section pulling plate	P 28	P 43
TOOL BPM 22-115 / Back Puller Mech Spindle	Puller-separator with mechanical spindle	P 24	P 42
TOOL FAST THERM (Capacity) / Induction Heater	Portable induction heater	P 11	P 33
TOOL FEELER GAUGES (Length)	Set of feeler gauges	P 18	P 39
TOOL FLEXIBLE HOSE (Length)	High-pressure hose with quick coupling connector (female)	P 17	P 39
TOOL FT (Capacity) LIFTING DEVICE	750 bars lifting device for heater	P 14	P 34
TOOL FT (Capacity) - YOKE (Bore min)	Single yoke for induction heater	P 11	P 33
TOOL GLOVE HEAT RESISTANT	Thermal insulation gloves	P 18	P 39
TOOL HMV (Size) / Piston Seals	Set of O-rings for hydraulic nut	P 16	P 35
TOOL HMV (Size) EBF / Hydraulic Nut	Hydraulic nut with metric thread and piston return device	P 16	P 35
TOOL HMV BALL PLUG 1/4	1/4" gas ball valve	P 16	P 35
TOOL HMV NIPPLE 1/4	Quick coupling connector, 1/4" gas (male)	P 16	P 39
TOOL HS (Min size / Max size) / Hook Spanner	Articulated manual hook spanner	P 09	P 31
TOOL IFT SET 33 / Industry Fitting Tool	33-piece mounting tool kit	P 07	P 31
TOOL LASERTEMP 301 / IR Thermometer	Infrared thermometer with laser targeting, aiming ratio 30:1	P 19	P 40
TOOL MANOMETER 700	Pump pressure gauge, 700 bars	P 17	P 38
TOOL MANOMETER ADAPTOR (Reservoir capacity)	Pressure gauge adapter depending on pump	P 17	P 38
TOOL PS (Min size / Max size) / Pin Spanner	Articulated manual pin spanner	P 09	P 31
TOOL PUMP 700B - (Reservoir capacity) L	Ultra-light, 2-stage hand pump	P 17	P 38
TOOL PUMP COUPLING 1/4	Quick coupling connector, 1/4" gas (female)	P 17	P 38
TOOL PUMP SET 700B - (Reservoir capacity) L / Pump with accessories	Hand pump kit with accessories	P 17	P 38
TOOL SCHP (capacity) TONS / Self-Center Hyd Puller	Self-centering hydraulic puller	P 26	P 43
TOOL SCMP 2/3 - (Max. spread) / Self-Center Mech Puller	Self-centering mechanical puller	P 25	P 42
TOOL TEMP PROBE (Size)	Temperature probe for induction heater	P 11	P 33

This image shows a full page of blank graph paper. The background is white, and it is covered by a uniform grid of thin, light gray lines. The grid consists of small squares that extend across the entire area of the page, leaving no margins or other markings.

With the help of our «field» experts,
you can increase the operational efficiency
of your business :

- By reducing your maintenance costs,
- By improving the quality of your maintenance work.
- By increasing your equipment's working life.

Bearing box offers:

- Practical training
- Maintenance product tool assistance
